

```

y>
<div id="app">
  input type="text" placeholder="请输入firstName" v-model="firstName">+
  input type="text" placeholder="请输入lasttName" v-model="lastName">=
  input type="text" v-model="fulltName">
</div>
<script>
var vm = new Vue({
  el: '#app',
  data:{
    firstName:'',
    lastName:"",
    fulltName:''
  },
  methods:{} ,

```

```

var vm = new Vue({
  el: '#app',
  data:{
    firstName:'',
    lastName:"",
    fulltName:''
  },
  methods:{},
  watch :{
    // watch属性可以监视data中指定数据的变化，然后触发watch中function中的处理函数
    firstName:function(newval,oldval){
      this.fulltName = this.firstName + "-" + this.lastName;
      console.log(newval + "---" + oldval);
      // newval + "---" + oldval
      //变化之后的数据---变化之前的事情
    },
    lastName:function(){
      this.fulltName = this.firstName + "-" + this.lastName;
    }
  }
});

```
