1: 使用transform 定位

```css
<style>
.t1{
    width: 300px;
    height: 300px;
    border: 1px solid black;
    position: relative;

}
.t2{
    width: 200px;
    height: 200px;
    border: 1px solid beige;
    position: absolute;
    top:50%;
    transform: translateY(-50%);

}
</style>
<body>
    <div class="t1">
        <div class="t2"></div>
    </div>
</body>
```

2:给父盒子使用display :table-cell;
                    veritical-align:model;

```css
    <style>
    .t1{
        width: 300px;
        height: 300px;
        border: 1px solid black;
        display: table-cell;
        vertical-align: middle;

    }
    .t2{
        width: 200px;
        height: 200px;
        border: 1px solid beige;
    }
```

```html
    </style>
  <body>
      <div class="t1">
          <div class="t2"></div>
      </div>
  </body>
```
